Abstract

"Theory without practice is empty, while practice without theory is blind"  
The truth of the above statement manifests itself in the value of social science's research methods to society which is the focus of this work. Therefore, the work argues the research that social science's methods of investigation into the social life of society remains a potent weapon in the hands of practical men in their societal re-engineering endeavors, despite its shortcoming. This means that apart from showing the main features and constraints of social science's research methods, this work also aims to bring to limelight the tremendous contributions of social science's research methods to social re-engineering.

**Keywords:** Research Methods, Social Sciences, Society

Introduction

Since philosophy is originally and is still "the mother of all sciences, it then behaves on it to continue to play the essential parental roles to other disciplines. Philosophy of social sciences is one of such parental roles. Indeed, the role of philosophy to social sciences is to critically question the basic assumptions and the methods of acquiring knowledge in social sciences in order to wake the latter up to the realization of acquiring knowledge that will not only have instrumental value but also intrinsic value.

Philosophy is part of the cultural background of any educated person, and nevertheless remains spiritual, fundamentally underdetermined in its own essence. In this paper we will try to identify the points of similarity and discrepancy between philosophy and science.

Rational of the study

What is research?

Research can be simply defined as "the process of acquiring knowledge". Introduction to Research Methodology, states that "in the social sciences, the application of the term "research" is restricted to activities designed to promote the development of a science of behavior. But if research is synonymous to the promotion of a science of behavior in social sciences as revealed, then what is social sciences?

The meaning of social sciences

Dist. Parbhani - 431511 (M.S.)

In view of the above, we make bold, in this paper, to discuss each social science discipline in relation to its focus on society. The social sciences, "which deal with human behavior in its social and cultural aspects, include the following disciplines: anthropology, sociology, economics, political science, and the study of international relations". This is important because some disciplines like history, law, education, linguistics and even philosophy can fit for social science disciplines without distorting the original meaning of social sciences. In other words, what are the methods of research in social sciences?

The main features of philosophy in social sciences

Originally, science means a systematic body of knowledge. We make bold to say that social science disciplines are science driven. By so doing, the methods of research in social sciences are scientific in nature. The reason is that social sciences are relatively new disciplines when compared to natural sciences and this has made their adoption of scientific methods necessarily compulsory. Consequently, the scientific methods which the social sciences use while carrying out any social investigation are experiment, hypothesis, observation, data analysis, objectivity, sampling, etc.
